

Semantic Web

Concepts, Technologies and Applications

Karin K. Breitman
Marco Antonio Casanova
Walter Truszkowski

 Springer

The *NASA Monographs in Systems and Software Engineering* series addresses cutting-edge and groundbreaking research in the fields of systems and software engineering. This includes in-depth descriptions of technologies currently being applied, as well as research areas of likely applicability to future NASA missions. Emphasis is placed on relevance to NASA missions and projects.

Also in this series:

Preface

As the volume of Web resources grows exponentially, researchers from industry, government, and academia are now exploring the possibility of creating a Semantic Web in which meaning is made explicit, allowing machines to process and integrate Web resources intelligently. How will this Web of the future be effectively built? No one really knows. Although guesses vary from author to author, some themes are recurrent, most of which are covered in this book. In general, emerging technologies will allow semantics to be added to existing Web resources, so as to make the Semantic Web vision come true.

This book provides a succinct account of this new Web, its principles, concepts, and related tools. Its main contribution lies in the ability to demonstrate how Semantic Web technologies may be integrated and realized in several application domains.

Organization of the Book

The text is divided into four parts. Part I begins with an educated forecast for the future of the current Web. This sets the foundation for the rest of the book. Chapter 1 provides a well-paced introduction to the Semantic Web, from motivations to requirements and guidelines on how to realize this concept.

Part II introduces the fundamental building blocks one should master to grasp the full meaning of the Semantic Web. Chapter 2 summarizes the various uses of the term ontology in computer science. Chapter 3 covers knowledge representation in description logic and provides the background for a better understanding of ontology description languages and tools. Chapters 4 and 5 introduce the Resource Description Framework (RDF), the RDF Vocabulary Description Language 1.0:

RDF Schema, and the Web Ontology Language (OWL), the knowledge representation languages proposed as standards for the Semantic Web. Chapter 4 also contains a very brief introduction to some essential XML concepts. Chapter 6 summarizes four rule languages, Datalog, the Rule Markup Language (RuleML), the Semantic Web Rule Language (SWRL) and TRIPLE, designed to manipulate knowledge bases. Chapter 7 provides a brief description of Web services and introduces OWL-S, a service upper ontology for Web services.

Part III focuses on emerging technologies that provide the necessary application development infrastructure and guidelines to develop Semantic Web applications. Chapter 8 surveys several ontology development methods, addressing their background and applicability. Chapter 9 discusses metadata standards, upper ontologies, and ontology libraries that are relevant to the indexing of resources in the Semantic Web, including the Dublin Core, the Warwick Framework, the Suggested Upper Merged Ontology (SUMO), the Knowledge Representation (KR) ontology, CYC, and WordNet. Chapter 10 covers a small selection of Semantic Web tools, with no intention of producing a complete survey.

Part IV illustrates how Semantic Web technologies, discussed throughout the book, can be consistently applied to four distinct application domains. Chapter 11 discusses software agents in the context of information technology systems and the role that ontologies play in their construction. Chapter 12 exemplifies the use of Semantic Web technologies in computing applications called semantic desktops, which enhance personal information management, software application usage, and collaboration. Chapter 13 reviews standardization efforts that facilitate the development of applications devoted to the cataloguing and dissemination of data about cultural collections. It also describes an application that combines a metadata schema with controlled vocabularies to create semantic annotations for still images of works of art. This profitable combination—metadata schemas, controlled vocabularies, and standardization efforts—is repeated in the next chapter in the context of geospatial applications, setting a pattern for other application areas. Chapter 14 then overviews the technologies that facilitate the development of the Geospatial Semantic Web, emphasizing the role of standard proposals. Each technology is first discussed from a broad perspective and then illustrated with implemented applications.

Possible Uses for the Book

This book is intended as a reference text on the Semantic Web for software engineers, database and information technology students, academics, and practitioners. It differs from other books on the topic because, rather than presenting the Semantic Web as a quilt of disconnected topics and examples, it provides a coherent body of concepts and technologies. The book reflects the authors' experience in research, graduate and undergraduate teaching, corporate training, and industry and government projects using Semantic Web technologies.

The text may be used as the main reference for an upper-level undergraduate course or an entry-level graduate course. At the graduate level, the text may be covered at a faster pace and complemented with additional material touching, for

example, on description logic, ontology tools, or different application areas, as suggested at the end of each chapter. The second format was tested in several one-semester offerings at the Department of Informatics of the Pontifical Catholic University of Rio de Janeiro, during 2003–2006. Portions of the text were also the subject of conference tutorials and short courses given by the authors.

Acknowledgments

The authors wish to thank Beverley Ford, Helen Desmond, Lesley Poliner, and Frank Ganz, from Springer, for their support throughout the preparation of the manuscript. The authors wish to extend their thanks to Michael G. Hinchey, editor of the *NASA Monograph on Software*, who gave them the opportunity to include this text in the series. Finally, the authors wish to thank Alice A. Casanova for her support in producing the final manuscript.

Contents

Preface

Organization of the Book v

Possible Uses for the Book vi

Acknowledgements vii

Part I — Introduction

Chapter 1 — The Future of the Internet

1.1 Introduction 3

1.2 The Syntactic Web..... 4

1.3 The Semantic Web..... 6

1.4 How the Semantic Web Will Work 6

1.5 What the Semantic Web Is Not 11

1.6 What Will Be the Side Effects of the Semantic Web 13

Recommended Reading..... 13

References 13

Web sites..... 14

Part II — Concepts

Chapter 2 — Ontology in Computer Science

2.1 Defining the Term Ontology 17

2.2 Differences Among Taxonomies, Thesauri, and Ontologies 20

 2.2.1 Taxonomies Versus Ontologies..... 20

 2.2.2 Thesauri Versus Ontologies 22

2.3 Classifying Ontologies 26

 2.3.1 Classifying Ontologies According to a Semantic Spectrum..... 26

 2.3.2 Classifying Ontologies According to Their Generality 27

 2.3.3 Classifying Ontologies According to the Information Represented..... 28

2.4 Web Ontology Description Languages 29

2.5 Ontologies, Categories, and Intelligence..... 31

References 33

Chapter 3 — Knowledge Representation in Description Logic

3.1 Introduction 35

3.2 An Informal Example..... 36

3.3 The Family of Attributive Languages..... 43

 3.3.1 Concept Descriptions 43

 3.3.2 Terminologies 49

 3.3.3 Assertions..... 51

3.4 Inference Problems..... 52

 3.4.1 Inference Problems for Concept Descriptions..... 52

 3.4.2 Inference Problems for Assertions 53

Recommended Reading..... 54

References 54

Chapter 4 — RDF and RDF Schema

4.1 Introduction 57

4.2 XML Essentials..... 58

 4.2.1 Elements and Attributes 58

 4.2.2 URIs and Namespaces..... 59

4.3 RDF..... 62

 4.3.1 RDF Statements and Vocabularies..... 62

 4.3.2 RDF Triples and Graphs 65

 4.3.3 RDF/XML..... 67

4.4 RDF Schema..... 71

 4.4.1 Classes..... 71

 4.4.2 Properties 74

 4.4.3 Individuals..... 75

4.5 A Summary of the RDF/RDF Schema Vocabulary 77

Recommended Reading..... 79

References 79

Chapter 5 — OWL

5.1 Introduction	81
5.2 Requirements for Web Ontology Description Languages.....	82
5.3 Header Information, Versioning, and Annotation Properties	85
5.4 Properties	86
5.4.1 Datatype and Object Properties	86
5.4.2 Property Characteristics	87
5.5 Classes.....	88
5.5.1 Class Descriptions	89
5.5.2 Class Axioms	95
5.6 Individuals.....	97
5.7 Datatypes.....	98
5.8 A Summary of the OWL Vocabulary	100
Recommended Reading.....	102
References	103

Chapter 6 — Rule Languages

6.1 Introduction	105
6.2 Usage Scenarios for Rule Languages	106
6.3 Datalog.....	107
6.4 RuleML.....	109
6.5 SWRL	114
6.6 TRIPLE	121
Recommended Reading.....	124
References	124

Chapter 7 — Semantic Web Services

7.1 Introduction	127
7.2 Web Service Essentials.....	129
7.2.1 Basic Components of a Web Service	129
7.2.2 Web Service Security Standards	131
7.2.3 Web Service Standardization Organizations	133
7.2.4 Potential Benefits and Criticism.....	134
7.3 OWL-S Service Ontology.....	135
7.3.1 Overview	135
7.3.2 Service Profile (What It Does)	138
7.3.3 Service Model (How It Does)	139
7.3.4 Service Grounding (How to Access).....	142
7.4 An OWL-S Example.....	143
7.4.1 Scenario Description	143
7.4.2 Informal Process Definition	145
7.4.3 OWL-S Process Definition.....	146
References	151

Part III — Technologies

Chapter 8 — Methods for Ontology Development

8.1 Introduction 155
8.2 Uschold and King Ontology Development Method 156
8.3 Toronto Virtual Enterprise Method 158
8.4 Methontology 159
8.5 KACTUS Project Ontology Development Method..... 163
8.6 Lexicon-Based Ontology Development Method..... 163
8.7 Simplified Methods..... 167
 8.7.1 Ontology Development 101 167
 8.7.2 Horrocks Ontology Development Method 171
Recommended Reading..... 172
References 172

Chapter 9 — Ontology Sources

9.1 Introduction 175
9.2 Metadata..... 176
 9.2.1 What is Metadata?..... 176
 9.2.2 Dublin Core..... 178
 9.2.3 Warwick Framework..... 179
 9.2.4 PICS 181
 9.2.5 vCards 181
 9.2.6 FOAF 182
9.3 Upper Ontologies 184
 9.3.1 SUMO 184
 9.3.2 KR Ontology 188
 9.3.3 CYC 193
 9.3.4 WordNet..... 195
9.4 Other Ontologies of Interest 195
9.5 Ontology Libraries 197
References 198

Chapter 10 — Semantic Web Software Tools

10.1 Introduction 201
10.2 Metadata and Ontology Editors 202
 10.2.1 Dublin Core Metadata Editor 202
 10.2.2 OilEd 203
 10.2.3 OntoEdit 203
 10.2.4 Protégé Ontology Editor..... 203
 10.2.5 Protégé Plugins and APIs 207
10.3 Reasoners..... 209
10.4 Other Tools..... 211
References 214

Part IV — Applications

Chapter 11 — Software Agents

11.1 Introduction	219
11.2 Agent Forms	220
11.3 Agent Architecture	223
11.4 Agents in the Semantic Web Context.....	225
11.4.1 The Role of Ontologies	225
11.4.2 Software Agent Communication in the Semantic Web	225
References	227

Chapter 12 — Semantic Desktop

12.1 Introduction	229
12.2 Semantic Desktop Metadata	230
12.3 Semantic Desktop Ontologies	233
12.4 Semantic Desktop Architecture.....	235
12.5 Semantic Desktop Related Applications	237
References	238

Chapter 13 — Ontology Applications in Art

13.1 Introduction	241
13.2 Ontologies for the Description of Works of Art.....	242
13.2.1 The Art & Architecture Thesaurus	242
13.2.2 The Union List of Artist Names	246
13.2.3 A Visual Annotation Ontology for Art Images	249
13.3 Metadata Schemas for the Description of Works of Art.....	253
13.3.1 The Categories for the Description of Works of Art.....	253
13.3.2 The ISO 21127 — A Reference Ontology for the Interchange of Cultural Heritage Information.....	255
13.3.3 The Visual Resources Association Core Categories	256
13.4 Semantic Annotation of Art Images.....	260
References	263

Chapter 14 — Geospatial Semantic Web

14.1 Introduction	265
14.2 Basic Geospatial Concepts	266
14.3 Classifying Geospatial Features	267
14.3.1 Geospatial Feature Type Thesauri.....	267
14.3.2 Geospatial Feature Ontologies	271
14.4 Gazetteers.....	277
14.4.1 Examples of Gazetteers	277
14.4.2 Standards for Gazetteers.....	278
14.5 Geospatial Metadata.....	280
14.5.1 Geospatial Metadata Standards	280
14.5.2 The FGDC Metadata Standard.....	280

14.5.3 The ISO 19115:2003 Metadata Standard 285

14.5.4 The ISO 19119:2005 Service Metadata Standard 290

14.6 The OGC Catalogue Specification 293

14.7 Geospatial Web Services 295

14.7.1 The OGC Services Framework 295

14.7.2 A Geospatial Web Services Architecture 297

14.7.3 Example of an Integrated Collection of Geospatial Web Services..... 298

14.8 Examples of Spatial Data Infrastructures 300

14.8.1 INSPIRE..... 300

14.8.2 NSDI 302

14.9 Example of a Metadata Catalogue for Earth Science Data..... 303

14.9.1 Overview of the GCMD 303

14.9.2 GCMD and Other Data Sources 305

Recommended Reading..... 308
