INTRODUCTION TO EXPERT SYSTEMS

INTERNATIONAL COMPUTER SCIENCE SERIES

Consulting editors **A D McGettrick** University of Strathclyde
 J van Leeuwen University of Utrecht

OTHER TITLES IN THE SERIES:

Programming in Ada (2nd Edn.) *J G P Barnes*
Computer Science Applied to Business Systems *M J R Shave and K N Bhaskar*
Software Engineering (2nd Edn.) *I Sommerville*
A Structured Approach to FORTRAN 77 Programming *T M R Ellis*
The Cambridge Distributed Computing System *R M Needham and A J Herbert*
An Introduction to Numerical Methods with Pascal *L V Atkinson and P J Harley*
The UNIX System *S R Bourne*
Handbook of Algorithms and Data Structures *G H Gonnet*
Office Automation: Concepts, Technologies and Issues *R A Hirschheim*
Microcomputers in Engineering and Science *J F Craine and G R Martin*
UNIX for Super-Users *E Foxley*
Software Specification Techniques *N Gehani and A D McGettrick (eds.)*
The UNIX System V Environment *S R Bourne*
Data Communications for Programmers *M Purser*
Prolog Programming for Artificial Intelligence *I Bratko*
Modula-2: Discipline & Design *A H J Sale*
Local Area Network Design *A Hopper, S Temple and R C Williamson*

Preface

This book began life as a series of notes to accompany my Expert Systems lectures to the undergraduate course 'Artificial Intelligence 2' given by the Department of Artificial Intelligence at the University of Edinburgh. Students taking this course come from a wide variety of other departments in both the science and the arts faculties, although there is usually a majority of computer science students. I have tried to retain both the introductory character of the original lectures and their intelligibility to readers of differing backgrounds. Thus no previous study of artificial intelligence is assumed. The book is aimed mainly at final-year undergraduates who are doing a course in knowledge-based systems and first-year postgraduate students in information technology disciplines. However, many chapters may be of interest to a wider audience of information scientists and persons interested in industrial applications of expert systems technology. It should be stressed that the book is not intended either as an exhaustive catalogue of existing systems or as a course in how to construct knowledge-based systems.

The original course had a programming component in which students learned to program in PROLOG. After some serious thought, it was decided not to wed the book to any particular programming language, nor to delve too deeply into issues of implementation. Such an orientation would have been at odds with the introductory nature of the text, and the level of description employed. Exercises are included at the ends of chapters where the content is sufficiently technical to merit practical involvement on the part of the student. For introductory texts to the more common artificial intelligence programming languages, the reader is referred to Winston and Horn (1984) for LISP, and Clocksin and Mellish (1981) for PROLOG.

I would like to thank colleagues at Edinburgh who commented on earlier drafts of some of the chapters. The comments of the reviewers were also invaluable in helping to redress many errors of judgement and emphasis; those that remain are entirely my own responsibility. Finally I would like to thank the AI2 class of '84 for helping me to debug my initial set of lecture notes.

Contents

Preface	v
Chapter 1 Expert Systems and Artificial Intelligence	1
1.1 An overview of related research in artificial intelligence	2
1.2 Research topics in expert systems	10
1.3 A word of warning	12
1.4 Exercises	13
Chapter 2 Heuristic Search in DENDRAL and META-DENDRAL	19
2.1 Structure elucidation of organic compounds	19
2.2 CONGEN: a constrained generator	21
2.3 Rule induction in META-DENDRAL	23
2.4 Evaluating DENDRAL and META-DENDRAL	26
Chapter 3 Production Systems	29
3.1 Pattern-directed inference systems	30
3.2 Production rules	31
3.3 Further aspects of control	35
3.4 Programming in OPS5	38
3.5 Some problems with rule-based programming	46
3.6 Exercises	47
Chapter 4 Structured Objects	52
4.1 Graphs, trees and networks	52
4.2 The rise of associative networks	53
4.3 Frame systems and prototypical knowledge	56
4.4 Object-oriented systems	60
4.5 Some problems with structured objects	66
4.6 Exercises	68
Chapter 5 Predicate Logic	72
5.1 The propositional and predicate calculi	73
5.2 Theorem proving, logic programming and knowledge representation	76

5.3	Logic for knowledge-based systems	85
5.4	Summary of the three formalisms	86
5.5	A word of warning	88
5.6	Exercises	89
Chapter 6	MYCIN: Medical Diagnosis using Production Rules	93
6.1	Treating blood infections	93
6.2	The consultation system	95
6.3	The explanation system	103
6.4	The rule acquisition system	105
6.5	Evaluation of MYCIN	105
Chapter 7	MYCIN Derivatives: EMYCIN, TEIRESIAS and NEOMYCIN	107
7.1	EMYCIN as architecture and abstraction	107
7.2	Knowledge acquisition in TEIRESIAS	108
7.3	FROM MYCIN TO GUIDON TO NEOMYCIN	111
Chapter 8	INTERNIST: Representation of Knowledge by Structured Objects	115
8.1	Background in abductive logic	115
8.2	Attention-focusing heuristics in INTERNIST	118
8.3	Concurrent problem formulation in INTERNIST-II	122
8.4	The implementation of INTERNIST and its current state	124
Chapter 9	RI: Recognition as a Problem Solving Strategy	126
9.1	The computational background: OPS5	126
9.2	Configurer of VAXes	130
9.3	RI and OPS: summary and conclusions	138
Chapter 10	CENTAUR: A Combination of Frames and Rules	142
10.1	Knowledge representation in CENTAUR	142
10.2	CENTAUR's control structure: hypothesize and match	147
10.3	Explanation and knowledge acquisition in CENTAUR	155
10.4	Summary of CENTAUR	156
Chapter 11	Meta-level Inference and Common Sense Reasoning in MECO	158
11.1	Envisionment in NEWTON	158
11.2	MECO as an essay in computational logic	160
11.3	Computational logic and natural reasoning	170
Chapter 12	Tools for Building Expert Systems	173
12.1	Experiences with EMYCIN in the US and the UK	174
12.2	Structured objects in AL/X and LOOPS	177
12.3	Logic for expert systems: APES and MANDALA	183
12.4	Inconclusive conclusions concerning expert systems tools	188

Chapter 13	Knowledge Acquisition	190
13.1	The problem of knowledge acquisition	190
13.2	Using environments for knowledge engineering	193
13.3	Reasoning about reasoning in META-DENDRAL	196
13.4	What is the state of the art?	204
Chapter 14	Explaining Expert System Behaviour	207
14.1	Survey of the state of the art	207
14.2	Explanations and automatic programming	209
14.3	Logic-based explanations: APES, MRS and TAG	212
14.4	The future of explanations	215
Chapter 15	Summary and Conclusions	216
15.1	A critical survey of knowledge representation schemes	217
15.2	Choosing a knowledge representation language	224
15.3	Final remarks	235
Bibliography		237
Index		244
